DETAILED ACTION

Response to Arguments

Applicant's arguments filed 8/14/2006 have been fully considered but they are 1. not persuasive. Applicant argued that Albrecht (US 5,704,365) fails to disclose the step of "identifying the separated signal as a cardiac signal using the separated signal and the non-electrophysiological cardiac source information", and that Albrecht only states that the ECG signal is "the desired output signal" thus lacks an identification or verification step. As stated in the previous Office Action, the mere fact that "the desired output signal is the ECG signal" (col. 5, line 62) amounts to "identifying the separated signal as a cardiac signal". This is based on the interpretation that "identifying" does not necessarily require a verification, questioning, or even a decision step. Although one sense of "identifying" requires a decision step (i.e. "identifying a suspect in a police lineup"), another sense does not (i.e. making equal or establishing the identity of). So, although Albrecht may or may not require a verification step, the Examiner's position is that the term "identifying" does not require a verification or decision. Because Albrecht "establishes the identity of" the output signal as a cardiac signal, Albrecht meets the claim limitation of "identifying the separated signal as a cardiac signal". Additionally, because the method of deriving the identification step is performed using the cardiac signal and the cardiac signal is derived using the non-electrophysiological signal, Albrecht further meets the claim limitation of "using the separated signal and the nonelectrophysiological cardiac source information".

Art Unit: 3762

2. Applicant further argued that Albrecht's impedance measurement is not a non-electrophysiological signal and that the definition supplied in the last Office Action is an inappropriate invocation of Official Notice. However, Applicant admits in claim 10 that impedance is a non-electrophysiological cardiac source information. Further, the definition of "electrophysiology" as defined by the American Heritage Dictionary, Fourth Edition is "The electric activity associated with a bodily part or function". Because impedance does not measure electric activity, but only changing conductance, it does not qualify as electrophysiological.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Kahelin whose telephone number is (571) 272-8688. The examiner can normally be reached on M-F, 9-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Angela Sykes can be reached on (571) 272-4955. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
